— Representativeness —

- > Data has been collected between January and March 2023 by our design team, then treated and analyzed in March 2023.
- > Data are related to the location of the production and assembly.
- > Data matches with previous technology and commercial references only.

— Manufacturing —

The devices covered in this PEP are manufactured in a production that has adopted an environmental management approach.

> **Energy model**

Chinese mix; 2018

— Distribution —

> Packaging is continuously improved by reducing the amount and using a maximum of recycled materials

> The unit pack has been modeled here. It is made up of:

- 100% recycled fiber paper instructions
- cardboard with a minimum of 50% recycled fibers

— Installation —

> **Installation elements**

There is no element included in this phase.

> **Installation processes**

There is no installation process

> **Energy model**

Not applicable

— Use —

For the considered scenario, the product has a power of 9W in active mode during 0.157% of the life cycle, and 0.037W during 99.843% of the life cycle. Measurement in accordance with NF EN 60335 and EN 50564.

> **Energy model of the use phase:** European mix; 2018

> **Consumables and maintenance :** None

— End of life —

> **Typical transport conditions**

Considering the complexity of the electric and electronic recycling channel and our lack of knowledge about the end-of-life processes implemented all around the world, we considered:

- 200 km of transport.
- A waste pretreatment of electrical and electronic equipment, including dismantling and material separation
- A waste incineration of electrical and electronic equipment.
- Loading rate of the truck going to the waste disposal center of 80%.

— Environmental impacts —

Evaluation of the environmental impact covers the following life cycle stages: manufacturing, distribution, installation, use and end of life.
All calculations are done with EIME software version EIME© v5.9.3 and CODDE 2022-01, on functional unit.
